

Pre-Calculus Honors

Summer Work 2021

Welcome to Pre-Calculus Honors! In this class you will be continuing to grow your Algebra skills throughout the year to utilize in Trigonometry with the last part of the course focusing on preparing you for Calculus.

This summer you are required to complete sections P.1, P.2, and P.3 in the prerequisite chapter of the textbook. All information is found on the Google Classroom page. In addition to the Google Classroom page, I have a website that contains all of the information you will need for the course.

What you need to do:

1. Make sure that you join the Pre-Calculus Summer Work Classroom page: [b7y43l4](#) I will be using our classroom page over the summer to share information with all of you. Please stay signed in so that you receive any communication.
2. There are 3 assignments associated with the 3 sections in the book. These assignments will be completed on Edia and are each worth 20 points. The link to each assignment will be posted on the Classroom page. Any assignment or any component of the Edia assignment can be redone until you are happy with the grade (this is not study island and you will NOT have to start the assignment over to try another parallel problem).
3. I will be posting videos for each section of the book. I encourage you to watch the video, take notes, try some of the book problems for practice, and then, when you are ready, complete the Edia assignment for that section.
4. The book pages will be available on our Classroom page as well as on my website. To find my website, use Chrome to search Mrs Evans Math Page Charter Arts. It should be the first link you see.
5. Reach out if you have any questions. I am available through Google Hangouts or via email: cevans@charterarts.org

Enjoy your summer and I look forward to learning with you next school year!

Mrs. Evans
